

Dimensions

case: width 168 mm
 height 1100 mm
 extended barrier: width 2300 mm
 height 1100 mm;
 assembly weight: approx. 7 kg
 water filled assembly weight: 16 kg

Description

Barrier entirely made of plastic, which enables various uses, such as a physical isolation barrier, a flag, a delimiter, among other possibilities. Its pantographic feature results in small volume to be kept or stored, and an excellent extent in use. Highly resistant.

Application

Isolation and identification of areas of small or large lengths, in indoor or outdoor environments, very often utilized in isolation of areas for maintenance, isolation of areas for labor safety.

Differentials:

Stainless (100% plastic) material, easy to carry in a case, with a highly impact resistant cover and rods with reflective material. Possibility of filling the base with water or sand to increase weight and improve stability.
