

Approx. weight 1.5 kg

### Description

Barrier made entirely of plastic (polyethylene), composed of 6 modules, which allows various uses such as an effective isolation barrier, as a flag, as an area delimiter and its modular structure results in a small volume for be kept or stored.

### Application

Isolation and identification of areas of small or large lengths (with the use of combined barriers), in indoor or outdoor environments, very often utilized in isolating areas for maintenance, such as elevators, escalators, gas stations, among other infinite possibilities.

### Differentials

Stainless material (100% plastic), composed of 6 modules, with the possibility of combining more than one barrier (3 sets for example can form one single barrier of 18 modules - as these modules can be fitted), the modules can be manufactured in different colors, forming a barrier in one single color, or even one with 6 modules of different colors (yellow/black for attention, red/white for chemical signaling, or even colored for use in children's environments), the personalization of the stickers can be made exactly according to customers' need.
