

Description

Easel made of polypropylene (PP) injected in yellow, with information and pictograms for signage and temporary identification of areas of flow of people. (approximate assembly weight - 900 g)

Application

Signage and temporary demarcation of areas where people have a flow, usually used with information and pictograms related to slippery, wet, men at work, among others. Due to its small weight, it is indicated for indoor use.

Differentials

Easel 100% made of plastic material, which allows its use in daily contact with water. It has suggested customization models, but allows the placement of any information in its face area 23x46cm, exactly according to the user's need.
