

Approx. weight
4.5 kg

Description

Pedestal made of high durability plastic material (base - PE, body - PVC, cover - ABS) with concrete base (approximate assembly weight: 4.5 kg) and metal hooks for mounting of chains or isolation bars (we recommend a distance of 1 meter between pedestals for their total efficiency in the utilization of chains and isolation bars)

Application

Signaling, flow guidance, isolation and demarcation of areas in indoor and outdoor environments.

Differentials

Base manufactured in one single piece, without a cover at the bottom, which does not allow the leakage of concrete residues which fill the base, besides not promoting scratches to the floor with rivets and screws in the base, as occurred in most of the options available in the market. Weather resistant, stainless, metal hooks and modern and efficient design. Collapsible assembly, supplied in boxes with 4 units, which saves up to 75% in freight and storage volume
