

Description

Pedestal made of high durability plastic material (base and tip and plate - PE, body - PVC, cover - ABS) with concrete base (approximate assembly weight: 5.7 kg) and A4-format molded plates with movable plate in transparent material and J-rail on one side for A4 size printing.

Application

Signaling, flow orientation, isolation and area demarcation and identification of materials, production orders and other operational needs which require the placement of information printed at visible and protected locations.

Differentials

It allows the placement of any information printed on A4 sheets, whether graphics or even user-made prints on a daily basis. Single-piece molded plate which can be manufactured in different colors involving the pedestal body, which promotes excellent (unbreakable) fall resistance.

Base manufactured in one single piece, without a cover at the bottom, which does not allow the leakage of concrete residues which fill the base, besides not promoting scratches to the floor with rivets and screws in the base, as occurred in most of the options available in the market.

Weather resistant, stainless, and a design far superior to all the others on the market.
