

Description

Pedestal made of high durability plastic material (base and tip - PE, body - PVC, cover - ABS) with concrete base (approximate assembly weight: 5.5 kg) and round, square, rectangular and arrow shaped plates.

Application

Signaling, flow guidance, isolation and demarcation of areas with the most diverse information in indoor and outdoor environments.

Differentials

Single-piece molded plate, which can be manufactured in different colors involving the pedestal body, which promotes excellent (unbreakable) fall resistance and weather exposure. It allows the customization of the stickers on the faces according to the specific needs of each customer, regardless of the requested quantity. Base manufactured in one single piece, without a cover at the bottom, which does not allow the leakage of concrete residues which fill the base, besides not promoting scratches to the floor with rivets and screws in the base, as occurred in most of the options available in the market.

Weather resistant, stainless, metal hooks and a design far superior to all the others on the market.
